

IN THE CLAIMS

Please amend Claim 10 as follows, by deleting the second period at the end of the claim:

10. (Currently amended) The system of claim 7, wherein the divider is spring loaded to bias the divider against the object when the divider contacts the object.[~~;~~]

IN THE DRAWINGS

Please amend the drawings as shown in the enclosed redlined Figs 3B, 4B, 6B, 8B, and 9, which show schematic representations of views of the objects in the obtained images, some portions of which were mirror images of what is obtained by the optics shown, as can clearly be seen by examining the optical configurations of mirrors (or reflective surfaces) in Figs 3A, 4A, 6A, and 8A. Since the Figs 3B, 4B, 6B, 8B, and 9 are schematic representations of images that show acquisition of two or more views of one part simultaneously on a single image, no new matter is added by showing the corrected mirror image, and no structural or conceptual changes are made to the invention.
